

Guide for Authors

1. Electronic copies of manuscripts should be emailed directly to the following address:
hjic@mk.uni-pannon.hu.

Please visit the Journal's website (<https://hjic.mk.uni-pannon.hu>) "Information for Authors" section for downloading a **Word template** and follow closely the suggested layout for the text, figures, tables, and references. Manuscripts without the recommended structure and formatting for publication will be returned without a review.

2. In a brief letter attached to each manuscript, **authors must declare that their work is original** and has not previously been published elsewhere. You can find a Declaration Form on the website ("Information for Authors" section). The editorial board requests an originality evaluation score to be below 10% according to CrossCheck/Ithenticate excluding quotes, references, and three-word expressions. If originality of a given manuscript is between 10-20% the authors are kindly requested to rewrite the overlapping sections. Nothing above 20% similarity will be accepted for publication and will not be sent out for review.
3. For the purposes of correspondence, the authors are asked to give their current **address, telephone, professional website (if applicable), and regularly accessed E-mail address**.
4. Authors are requested to adhere to the rules given below and follow the examples:
 - The layout of manuscripts should be A4 page size (21 cm × 29.7 cm) with double columns, single-spaced (approximately 45 characters per line, 55 lines per page), and numbered pages using the same format settings as given in the templates.
The text of the papers should be concise, and not exceed twelve pages; even with Tables and Figures the manuscript should not exceed a total of twelve pages. These limits may be lifted for reviews and invited articles for themed issues.
 - The first page should give the title, the full name (no abbreviations please) of the author(s) in the sequence to be published, the name and address of the institution where the work was completed, and a brief summary of the article (maximum 15 lines). The title of the paper should not exceed 15 words. At least three keywords must be specified, but not more than seven.
 - The corresponding author or authors should be clearly marked.
 - The paper should be divided into sections and subsections. The article should include the following sections: "Introduction", "Experimental" or "Theoretical methods", "Results and analysis", "Discussion" and "Conclusion". A "Conclusion" section is mandatory with at least a paragraph presenting the main outcome(s) of the given study, not just repeating the abstract or summarizing the study.
 - **Tables and Figures must be inserted into the text** at their closest position to the first mention, flushed with the top margin as much as possible. Drawings must be of high

contrast and have continuous curves. Please attach the source of the figure/scheme graphics if available in at least 300 dpi resolution. Characters and labels should be sufficiently large to allow for reproduction. All figures must contain decimal points and not commas. Tables and Figures should not exceed one A/4 size page, (**maximum width of Figures: portrait 8 cm; landscape 16.5 cm**). If diagrams are presented, only the explanation and dimensions of the abscissa, ordinate and marking numbers are required, further explanatory texts can be given in the caption. Please remove any excess white space around the figures.

Every table and figure should be numbered and referred (e.g. [Table 1](#); [Figure 1-3](#).)

- Note that the electronic deposition of the published version of the manuscript will contain coloured graphics; however, the printed version will only be reproduced in black and white unless otherwise requested for a fee.
- Equations should always be stand-alone, i.e. occupy an extra line and marked with Arabic numerals in parentheses on the right-hand margin. Efforts avoiding equations in two columns are appreciated. Equations should be referred to only after they were defined, namely, solutions like this should be avoided: „Parameters, *a*, *b*, and *c* are coupled through Eq. (3):

$$a+b=c \quad (3)''$$

The correct solution to the example above:

„Parameters, *a*, *b*, and *c* are coupled through:

$$a+b=c \quad (3)''$$

And later in the text we refer to [Equation 3](#).

- The summary of the symbols used must be included at the end of the manuscripts after the Conclusion section under the heading “SYMBOLS”. Symbols and abbreviations that represent variables, constants, quantities, properties etc., must be defined in the text at/before their first occurrence.

Abbreviations should be defined at the first mentioning of the abbreviated item and used since.

- **Only SI (System International d'Unites) units are to be used.** If data with non-SI units are reported, they should be in parentheses following the corresponding data in SI units.
- If text is copied from another source, it should be included between quotation marks and the source should be acknowledged.

5. References should be numbered throughout the text, written in square brackets (not in superscript position) and should be cited with hyperlink (cross-reference), e.g. [1]. The references are also to be listed at the end of the manuscript in the order they are cited in the text. Every reference given in this list should be referred to.

The style and punctuation of the references should conform to the APA Style (<https://apastyle.apa.org/style-grammar-guidelines/references>). For a quick reference please consult the following examples:

Papers that are unpublished but have been submitted to a journal may be cited with the journal's name, followed by “submitted for publication” or “in press”. This will only be accepted if the author uploads the submitted manuscript as ‘editorial’ material. No reference to “unpublished work” or “personal communication” will be accepted.

All references must be provided with a digital object identifier (DOI). DOI Please provide the editorial office with a rationale for any citations without DOI numbers and explain why these references are necessary.

6. The manuscripts are initially assessed by the editor for suitability for the journal. The contributions are then sent to two independent experts, anonymous reviewers to assess the scientific quality of the paper (peer review process). The authors do not know the referee, but the reviewers can see the authors' name and all the manuscript, of course. The reviewers may be the members of the editorial board, may be not. The Editor is responsible for the final decision regarding acceptance or rejection of articles.
7. Authors receive galley proofs, which they are to be corrected and returned as soon as possible, but no later than 1 week after receipt. No new material may be inserted into the text at the time of proofreading.
8. **Authors who are less practiced with written English are urged to have their manuscripts checked by scientists who are working in the Author's respective field and proficient in English.**

In the case of doubt, refer to papers in the last few years (they are freely accessible at the webpage) or contact us:
